

Our Principle M/s Taisei Kogyo co. Ltd., Japan are specialized manufacturers of Oil Filters, Coolers and Heat Exchanger.

FILTERS & FILTER ELEMENTS

Taisei filter elements have a high performance of decontamination to protect your system.

ADVANTAGES:

- Filters very fine particles of 1 μm to 5 μm .
- Helps to prolong the service life of hydraulic systems.
- Have high performance of decontamination.
- Used for high system pressure and temperature.
- Higher filtration ratio removes large numbers of contamination.

Cellulose Filter Element

Notch Wire Element

Micro Glass Element

Wire Mesh Element

HEAT EXCHANGER

Heat Exchanger raises the system efficiency & protects oil breakdown by maintaining the proper hydraulic oil & lubrication oil temperature. A Heat Exchanger using low fin tubes is known to show high performance in heat transmission of Water and Oil. TAISEI developed a rolling machine to create high-quality low fin tubes.

Features:

- Largest number of fins in the heat exchanger industry (28 fins/inch).
- Smallest diameter of heat exchanger $\varnothing 9$.
- Compact size and High performance.
- Flexibility.
